OCTOBER 2009

In the run-up to the UN Conference in Copenhagen in December, CarbonSense has been involved in a climate modelling project, leadership development, the development of corporate carbon strategies and practical progress by local authorities and others.

Tell your carbon story

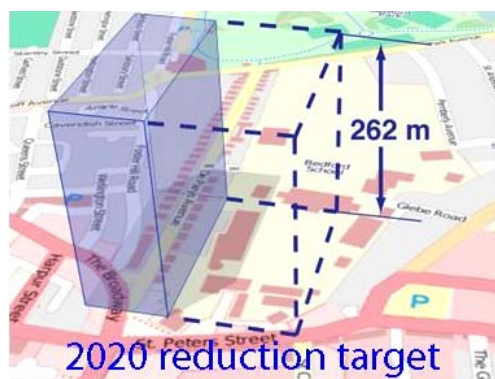

Companies, governments, individuals and public authorities now have a powerful new tool available to help tell carbon stories. Carbon footprints can be brought to life and even seen as a 'patch' of the whole global Carbon Quilt. Emissions can be depicted at real time rates and set alongside familiar landmarks in customised images. Visit the Gallery at [Carbon Quilt](#).

As a patch of the global Carbon Quilt, New York City's emissions (Scopes 1 and 2 Co2e) cover half the area of New York State (2006/07 figures)

One Planet Leadership

Antony Turner led a climate change and carbon workshop for international executives attending the WWF One Planet Leaders course in Switzerland in September. His *stellar performance* helped to paint a clear picture of the challenges ahead and the leadership required to return the human race towards living within ecological limits. For input to your event, visit [CarbonSense](#).

Picturing targets

While international negotiations over carbon reduction targets continue, UK companies and local authorities are setting targets and carbon budgets for their own operations. CarbonSense is providing critical analysis, strategic guidance and powerful visual aids to support decision-making. Contact CarbonSense for strategic and operational analysis. For visual examples visit [Carbon Quilt](#).
